

Hi, I'm Tanveer Singh

Sr. Front-end Developer / Team Lead

About me

I am a front-end developer who can design, too, with a strong focus on UX experience. I love to get new experiences and always learn from my surroundings. I've done many projects, including enterprise-level projects for fortune 500 companies. I am always ready to take on new challenges. I am looking forward to new challenges or making new connections.

Project Details

Learning Platform

Plus Portal and Learning Management

Plus Portal is used by the high growth customers who are signed up on the Plus Plan, which provides them with additional features and a dedicated CSM who supports them. Plus Portal allows them to manage multiple sites without separate login to the other sites. Learning Management handles the enrolment of the users in the multiple learning products.

This project uses the latest technologies, including React, Hooks, GraphQL, Ruby on Rails, Webpack and TypeScript

Internal Framework

WebStudio

It is a framework used by all internal and external banking applications for DBS Bank for countries such as Taiwan, Hong Kong, India, Indonesia and Singapore to develop the portal for bank customers to make their experience seamless and banking easy. The framework also consists of Micro-Frontends abstracting all basic banking features such as Fund Transfers, Fixed deposits, Account Opening etc.

This framework uses the latest technologies, including React, Redux, Redux-Saga, Style-Components, Webpack and TypeScript.

Web Application

DigiTaiwan

DBS Bank operates in multiple countries, and one of those countries is Taiwan. For bank customers in Taiwan, DBS Bank has provided them with an internet banking website. With the help of this banking website, bank users can do their daily banking operations such as Balance checks, Fund transfers, Pay bills, Fixed Deposits, etc.

Users can also be onboarded to the DBS bank by creating new accounts in a brief span of time. The sign-up process is straightforward and can be done in a few clicks.

Technologies used were: ReactJS, Redux, Redux-Saga, Styled Components, Cypress and Jest

Web Application

Tokio Marine Swift

Tokio Marine Swift is a web portal used to create a claim and access other insurance-based services. Apart from user insurance services, a web portal was also in development, which is used for policyholders to file claims and letters of guarantee. For Admin work, an intranet portal was created to approve and reject claims and other applications.

This application was built on React, Redux, Redux-Saga, Style-Components, and TypeScript.

Roles and Responsibilities

Thinkific Labs Inc.

Senior Front-end Developer & Team Lead

- Holding dailies, plannings, retrospectives & refinements/grooming sessions.
- Collaborating with the PMs to scope and plan the work.
- Developing and maintaining the supporting materials for the project.
- Providing estimates based on team availability using metrics from tools.
- Architecting and defining solutions for complex designs and UI.
- Holding 1v1 with team members to gauge team health and groom them to succeed in their careers.
- Working on the release plan and planning for the upcoming projects in the pipeline.
- Holding various triages; one to plan maintenance work and others directly related to the current project/feature.
- Doing code reviews for every PRs and ensuring the project quality remains high.
- Creating a testing plan and holding bug bash before project release.

DBS Bank

Senior Software Engineer / Senior Associate

- Creating core UI components for the Framework.
- Mentoring junior developers and reviewing their code.
- Writing Test Cases, including E2E, TDD and Unit tests and ensure 80% code is covered.
- Interacting with Product Owners to provide the best possible solutions.
- Developing MFEs for other countries' developers to use.
- Understanding customer journey and breaking it into small story cards.
- Attending Defect Triage and resolving defects as per SLA.
- Develop scenario-specific components for use in the application.
- Working with a pair-programming approach and helping other devs in their tasks.

Xchanging Solutions

Senior Software Engineer

- Working on-site with various clients.
- Collaborating with the Client Designers to come-up with better UI/UX as per requirements.
- Using Frameworks like Angular and React to build the UI.
- Populating the UI dynamically using Web Services
- Writing automation test cases for critical user journeys
- Troubleshooting the problems during system integration and testing.
- Providing support after the product deployment and adding new features according to CRs.
